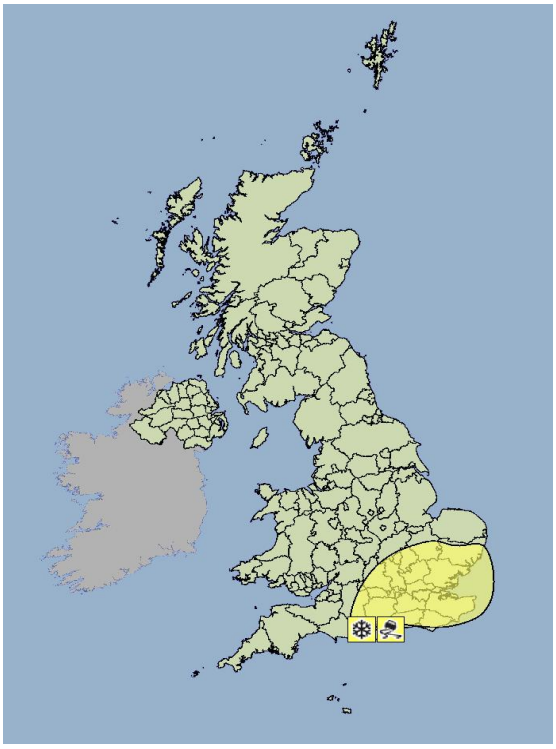
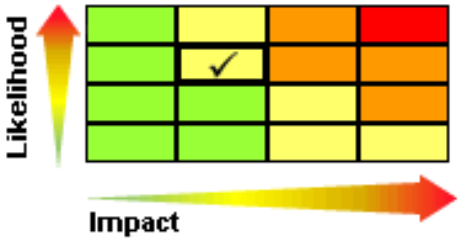
National Severe Weather Warning Service





Chief Forecasters Assessment
With cold conditions and some snow lying over parts of England, as well as further rain pushing in from the southeast during the second half of the night, icy stretches have formed on untreated surfaces. At the same time some snow will fall over parts of southeast England this morning and early afternoon as well as over parts of East Anglia in the afternoon. However, most accumulations here should be above about 100 m.

This is only a low impact warning with impacts much less widespread and less significant than across parts of England and Wales on Sunday.

The Met Office have issued a **Yellow Warning** of **Snow and Ice**

Valid from **09:25 on Mon, 11th Dec 2017** until **16:00 on Mon, 11th Dec 2017**

Ice has formed on some surfaces Monday morning as well as some snow falling, with small accumulations above around 100 m.

Some snow accumulations of 2-5 cm are possible above around 100 m but at lower levels no accumulations are expected. Instead a mixture of rain and sleet is most likely.

Some injuries are possible from slips and falls on icy surfaces and there will probably be some icy patches on untreated roads and cycle paths. Some roads and railways are likely to be affected with longer and more difficult journeys.

This is an update to extend the warning into Monday afternoon, pull this a little southwards and to make this a combined snow and ice warning.
